

BULLNOSE **SHELVING** UV EDGE

- MDP and MDF raw & primed
- MDP and MDF taped edge
- MDP and MDF prefinished

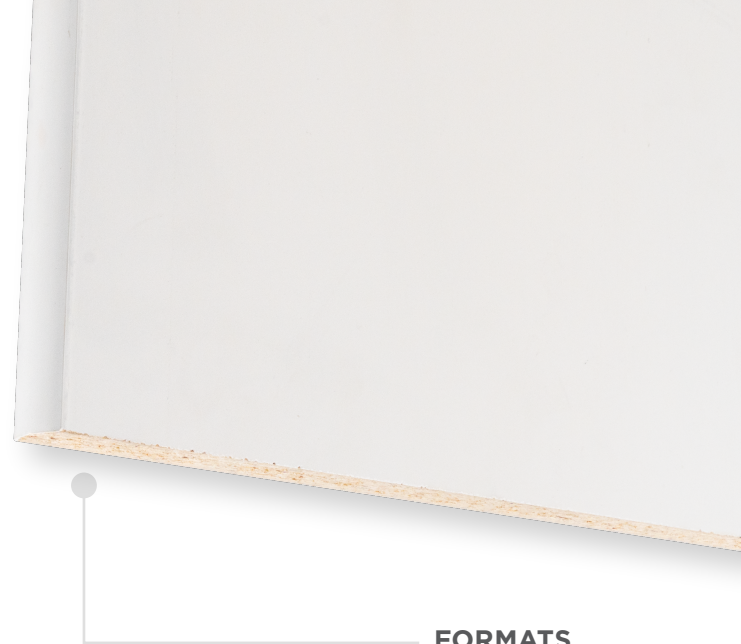

BULLNOSE SHELVING

The MDP and MDF Bullnose Shelving application is a specialized use of Medium-Density Particle and Medium-Density Fiber boards bullnose moulding, which are a versatile and popular trim materials used in various architectural and interior design with a rounded or curved edge, commonly referred to as a bullnose profile.

In this case, the mouldings edge have UV protection, which provides greater resistance to ultraviolet rays, high temperatures and cracking.

USES OF THE PRODUCTOS

Masisa® Bullnose Shelving application serves several purposes. It is primarily used for finishing and decorative purposes, providing an aesthetically pleasing transition between different surfaces or covering gaps and joints. Masisa® bullnose shelving is often installed along the edges of walls, ceilings, doorways, windows, or cabinetry to add a smooth, rounded finish and to protect the underlying structure.
